

ABSTRACT OF THE DISCLOSURE

A circuit board module comprises a battery case101 storing a battery of which external terminals 4 have a laminated members 8 made of different metal material for each other, a circuit board102 for carrying out charge and discharge of the above-mentioned battery, and a joint member103 for connecting the battery case101 and the circuit board102 electrically and/or mechanically, wherein the joint body103 is constructed by clad material that a first metal layer111 and a second metal layer112 made of different metal materials each other are laminated.
